## WORK EXPERIENCE

### **Immigration country and international carrier, Munich Germany - May/2022 - present**

*In May 2022, my husband got an offer to move to Munich and work there. Since then, I have been focusing on improving my technical and communication skills while looking for an opportunity to also establish my international development career.*

### **Software Developer, Stefanini Brasil - FEB/2020 - MAR/2022**

*Stefanini is an IT outsourcing company, their core is hiring IT professionals and providing valuable skilled workers to their customers in all areas of technologies ...*

- **Development and maintenance:** I worked on developing new React components, such as data grids, maps, and some other business components. For most of them, I coded unit tests with Jest and did prototyping with the storyBook tool.
- **Reverse engineering and documentation:** I worked on studying the legacy system to identify and map some business rules. As a result, we created some documents to support the development and testing of these functions in the new system.
- **Integration test development:** I support the verification of data integrity before and after the execution of all test suites and contribute to increasing the number of mock classes to support the development of new test scenarios.
- **Database Data migration:** I assisted the team in reviewing and creating SQL scripts to migrate data from the old database to the new one. In total, my team migrated more than 200 tables including data.
- **Support for trainings and workshops:** After my first year with the company, I assist team leaders in onboarding new employees and explain how our internal processes work and how to apply coding best practices.

**Technologies used:** ReactJs, NextJs, Jest, Tailwindcss, css, html, javascript, historyBook, SQL scripts, relational databases, JIRA ticket Management tool, Agile Using Scrum & Kanban.

**Junior Software Developer, Intech Soluções em TI - JAN/2019 - JAN/2020 - Brazil**

*Intech is a private that offers systems and tools for the management of the employee's retirement pension.*

- **Development and maintenance:** of common features to execute CRUD operation and basic analytics reports.
- **Development of DDL and DML SQL scripts:** to modify and evolve the system database.
- **Development of documentation:** and training tutorials for new licensed users.
- **Provide support and assistance:** to new users or customers of the Maker tool.
- **Technologies used:** Maker low-code tool with Java and Javascript, HTML, CSS, Modeling diagrams, and business BPM workflow, diagraming dynamic GUI, SQL SERVER Database, Kanban, Remote access, and software deployment.
